A low-fiber/low-residue diet is a diet whose goal is fewer and smaller bowel movements each day. The diet may be used as part of the bowel preparation before a diagnostic procedure such as colonoscopy or as a short-term therapy for acute stages of gastrointestinal illnesses such as Crohn's disease, diverticulitis, bowel obstruction, and ulcerative colitis.

The ketogenic diet is a high-fat, adequate-protein, low-carbohydrate diet that in medicine is used primarily to treat difficult-to-control (refractory) epilepsy in children. The diet forces the body to burn fats rather than carbohydrates. Normally, the carbohydrates contained in food are converted into glucose, which is then transported around the body and is particularly important in fueling ...

Background: Gastroparesis is a condition that greatly reduces, or in some cases completely eliminates, the ability of the stomach to properly digest food and move it through the digestive tract. When functioning normally, the muscles of the stomach frequently contract to crush food and push it to the next stage of digestion.
